

Advanced Human Cellular and Tissue Product (HCT/P) Therapy for Chronic Pressure Ulcer Treatment in a Patient with Diabetes and Paralysis*

Indy Wound Center for Limb Preservation and Reconstruction,
Indianapolis, IN

PATIENT OVERVIEW

A 65-year-old male with diabetes mellitus (DM) and a cerebrovascular accident (CVA) resulting in paralysis presented with a sacral pressure ulcer lasting over 3 months. Prior treatments, including Dakins solution packing, wound vac therapy, and calcium alginate, alongside offloading techniques (pillow wedges, frequent turning), failed to show adequate improvement.

Before applying an HCT/P, the patient was managed with:

- NPWT (Negative Pressure Wound Therapy)
- Nutritional supplementation (L-Arginine, vitamins)
- Urine and fecal management
- Skilled home health wound care

CLINICAL APPROACH

- MRI excluded osseous pathology.
- A1c: 5.7% (good glycemic control).
- **Nutrition:** Supplemented with Juven and Ensure to optimize protein intake.
- **Offloading:** Prescribed a low air loss mattress and a ROHO cushion. Given the lack of progress with conservative therapies, the patient was deemed a candidate for an HCT/P.

MEMBRANE TREATMENT

BEFORE
12/27/2023

AFTER
03/01/2024

Date	Wound Size (cm)
12/27	3.2 x 2.5 x 1.0
1/12	2.2 x 2.5 x 0.6
1/19	6.0 x 2.0 x 0.4
2/20	9.0 x 1.3 x 0.2
2/12	0.9 x 1.3 x 0.2
2/23	1.1 x 0.8 x 0.2
3/10	0.8 x 0.8 x 0.2

CONCLUSION

This case highlights the use of an HCT/P managing a chronic sacral pressure ulcer in a patient with diabetes mellitus and recent stroke. The patient received negative pressure wound therapy, nutritional supplementation, urine and fecal management, and skilled home health wound care. The patient progressed with the use of HCT/P treatments, with regular follow-up ensuring continued wound management and improvement.

ABOUT MEMBRANE WRAP™

BioLab Membrane Wrap™ is a dual-layer amnion-amnion human tissue allograft derived from the amniotic membrane that serves as a barrier and provides protective covering for the wound. It is minimally manipulated, preserving the properties exhibited in its natural state** while remaining compliant with FDA Regulations.

** All BioLab Holdings Membrane Wrap™ allograft tissue products have been tested for potentially infectious diseases and terminally sterilized to ensure the safety of each membrane.
