Randomized trial studies the efficacy of Membrane Wrap with the Standard of Care compared to the SOC alone

BIOCAMP Trial with The Serena Group:

The BIOCAMP trial is a multicenter, prospective, randomized controlled study assessing the efficacy of human placental membrane products, specifically Membrane Wrap™ and Tri-Membrane Wrap™, combined with standard of care (SOC) versus SOC alone in the management of nonhealing DFUs and VLUs. This trial has over 326 subjects so far with over 213 currently randomized to either DFU or VLU treatment arms and a separate SOC arm.

Multicenter Study of Tri-Membrane Wrap™ & Membrane Wrap - Lite™ on DFU's and VLU's

Real-World Evidence (RWE) Retrospective Trial with MCRA:

The CAMP RWE trial is a multicenter hybrid platform comparative studying the effects of a prospective cohort treated with a tri-layer amnion graft or a single-layer amnion graft to a matched retrospective control cohort of patients with hard-to-heal DFUs and VLUs. This trial has finished enrolling patients and statistics are being compiled now. Expected completion by August 2026.

A real-world data study evaluating Membrane Wrap™ on Pressure Ulcers

Retrospective Study:

Trial on DFUs demonstrating the efficacy over SOC utilizing Membrane Wrap™ is available on Wound Care Today website. A Pressure ulcer study on the efficacy of Membrane Wrap™ is now in the publishing phase.

Competitive Study on Bacteria Detection

BIO-SEE Trial:

The BIO-SEE trial is a comparative, prospective study comparing MolecuLight and tissue biopsies to the fluorescent imaging bacteria detection capabilities of the cureVision device. An observational study to use Microlyte[®] PainGuard[™] to the biopsy site is included in this in progress trial. We will complete data collection this week. This is slated for completion in September, 2026.

Upcoming Trials

July, 2026

Multicenter Study of Membrane Wrap - Hydro[™] & Microlyte on DFU's and VLU's

CAMPR-II Trial:

is an identical study to CAMP RWE but using two different products: Membrane Wrap - Hydro[™], Microlyte[®] SAM[™] and Apis[®] from our partners at Sweet Bio[®]. This will study DFU and VLU's as well. This will allow us to study all three products simultaneously.

Cold Plasma Comparative Standard of Care Study

CAPTURE Trial:

This trial is studying the positive clinical effects of Cold Plasma using Terraplasma Medical[™]'s device. A comparison of Terraplasma Medical[™] with SOC against SOC alone. The protocol is completed, and summer enrollment is expected.
